**3 FLASHES**  
Door control or wire shorted.

- **Symptom: LED is not lit on door control.**
  - Inspect door control/wires for a short (staple in wire), replace as needed.
  - Disconnect wires at door control, touch wires together. If motor unit activates, replace door control.
  - If motor unit does not activate, disconnect door control wires from motor unit. Momentarily short across red and white terminals with jumper wire. If motor unit activates, replace door control wires.

**4 FLASHES**  
Safety reversing sensors slightly misaligned (dim or flashing LED).

- **Symptom: Sending indicator light glows steadily, receiving indicator light is dim or flashing.**
  - Realign receiving eye sensor, clean lens and secure brackets.
  - Verify door track is firmly secured to wall and does not move.

**5 FLASHES**  
Motor overheated or possible RPM sensor failure. Unplug to reset.

- **Symptom: Motor has over heated; the motor unit does not operate or trolley is stuck on stop bolt = Motor unit hums briefly; RPM Sensor = Short travel 6-8" (15-20 cm).**
  - Unplug unit to reset. Try to operate motor unit, check diagnostic code.
  - If it is still flashing 5 times and motor unit moves 6-8" (15-20 cm), replace RPM sensor.
  - If motor unit doesn't operate, motor unit is overheated. Wait 30 minutes and retry. If motor unit still will not operate replace logic board.

**6 FLASHES**  
Motor Circuit Failure. Replace Receiver Logic Board.

- **Symptom: Motor unit doesn't operate.**
  - Replace logic board because motor rarely fails.
